IT health check for schools and community organisations

An independent review of your technology, with a clear, personalised report anyone can act on.

IT support that teaches you as it fixes.

What you get

On-site review

We visit, look at how your technology is actually set up and used, and check it against good practice.

Staff conversations

We talk to the people who use the systems every day, not just whoever looks after IT.

Systems and application map

A clear picture of what you run, who owns it and how it all fits together.

Good-practice check

Security, backups, accounts, devices and networks reviewed in plain language.

Future-proofing your tech

Ageing kit, upgrades worth planning for, and advice on using AI safely.

A report anyone can use

A personalised, actionable report that works for leadership, staff or your IT team. We talk you through it.

How it works

1. Free scoping call

A short chat about your size, setup and what you want out of it.

2. On-site review

Typically 2 to 3 business days on site.

3. Your report

A personalised, actionable report with priorities in a sensible order.

4. Walkthrough

We talk you and your team through the findings and what to tackle first.

Pricing

Every organisation is different, so each health check is a **custom quote** based on your size and scope. The first call is free, and you will know the price before any work starts.

Optional add-on: AI advice for your staff. A fixed-price workshop on using AI safely and sensibly. General guidance only, not legal or compliance sign-off.

How we work

Insured

Professional indemnity and public liability insurance. Certificate on request.

Working With Children Check

Current check held, so we can work on site around young people.

Careful with your data

We review how systems are set up, not the content of your records, and we do not copy or keep your data.

Confidential report

Your report goes to you and nobody else. We do not share it with third parties.
